

SINGLE SIGN-ON SOLUTION

Business Problems

One of the greatest security vulnerabilities that companies face is the loss or theft of users' passwords. Maintaining multiple user names and passwords is challenging for many users and companies are at risk if users write down their passwords or if they create passwords that are too simple and easily guessed.

But this isn't the only problem. With multiple passwords for different systems, users can often forget their passwords and need to contact IT for a replacement. A further significant burden for IT is the creation of new user accounts and passwords when an employee joins the company and the removal of system access when they leave. Creating user accounts and granting Oracle E-Business Suite (EBS) responsibilities is manual, time consuming and costly. The whole organization can even be impacted

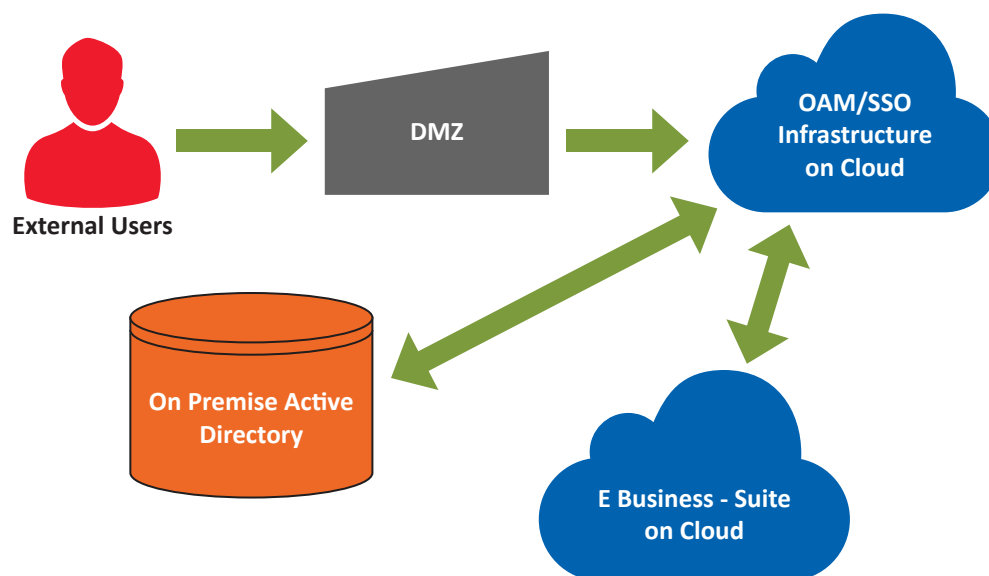

if there is no robust password management system because this can affect compliance to regulations such as SOX and HIPAA.

Solution

Apps Associates has developed a single sign-on solution that permits a user to enter one name and password in order to access multiple applications.

Based on the Oracle Identity and Access Management software suite, the Apps Associates solution is a cloud based package that has been prebuilt and configured to enable Single sign on with Oracle E-Business Suite.

The solution is available at a low price point with typically one production and one test server. The Apps Associates solution does not include the licenses for Oracle Identity Management.

Apps Associates has many years of experience implementing Oracle Identity Management and integrating on-premises Active Directory with E Business Suite hosted in the Amazon Web Services cloud. Because this solution is pre built it provides faster time to market by implementing the SSO on the cloud.

Benefits

A single sign-on solution will simplify password management for users and speed up access to applications by eliminating the time spent re-entering passwords. IT costs will also be reduced

as password resets will be minimized and the user identity life cycle is easier to manage. Because it is pre-built and requires minimal customization, the Apps Associates solution deploys single sign-on at a very competitive price and accelerates implementation to maximize return on investment.

The greatest benefit of the solution is increased security as users only have to remember a single password and won't need to write down or store multiple usernames and passwords. Finally this solution strengthens governance, risk management and compliance.

ABOUT APPS ASSOCIATES

Apps Associates is a global IT and business services organization that provides solutions for Cloud, Analytics and Integration. Our mission is to partner with customers to enable business improvement by streamlining business processes using advanced technology. We innovate by constantly launching new services and solutions and we differentiate through our relentless attention to delivery excellence and customer care.
