

Data Masking

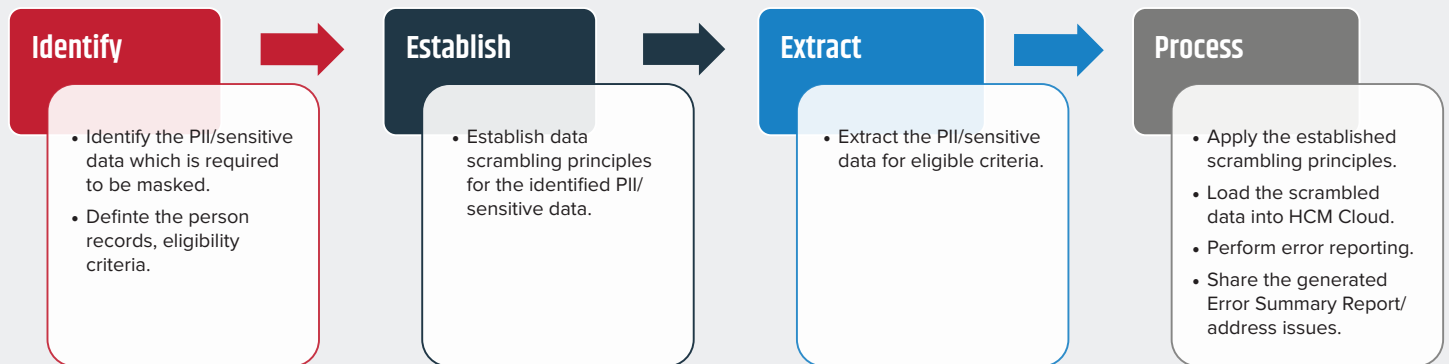

Designed for Oracle Cloud HCM

Are you protecting your PII (Personal Identity Information) and sensitive data in your test, and development environments? Apps Associates has developed a process to scramble the PII data in your non-production Oracle Cloud HCM environments. The Data Masking process protects sensitive data, sanitizes PII production data while maintaining usability of your non-production environments.

How Apps Associates Data Masking Works:

We follow a simple four stage process. We identify, establish, extract, and process data as outlined below:

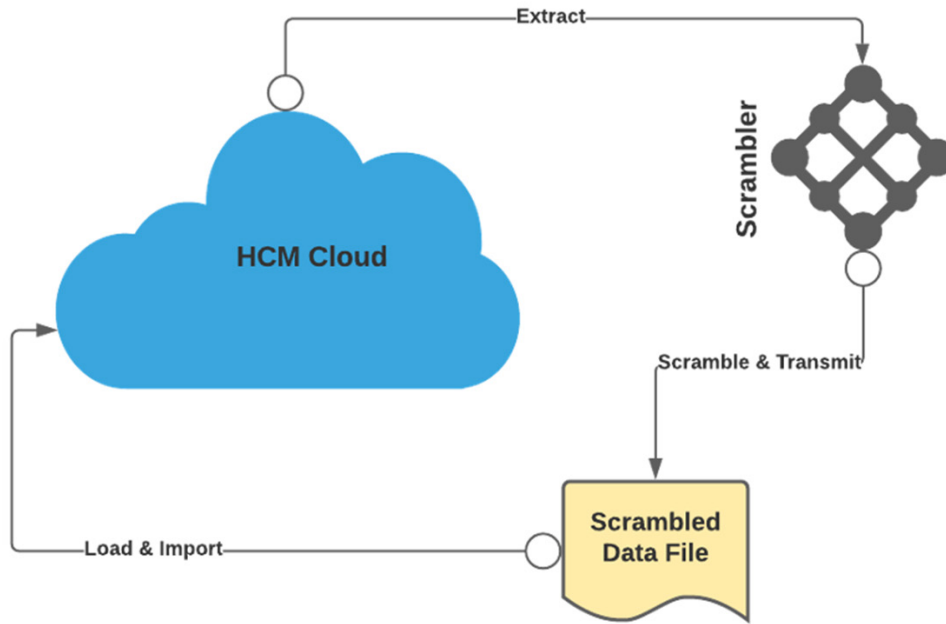

- Utilizes HCM Cloud Tech Stack (Inbound Extracts and Data Load Functionality)
- Can Run Anytime - No Downtime Required
- No Middleware Needed

- Minimal Efforts in Adoption, Deployment and Maintenance
- Maintain Data Integrity & Security
- Cost Effective Approach

Data Masking is ideal for controlling unapproved access to data, masking sensitive information such as social security numbers, home addresses, and salary information to users. It protects data by generating similar but false data to minimize compliance and security risks.

It is clean, easy and no middleware is needed. There is minimal manual activity and no downtime. See architectural flow below:

If you are looking for end to end data scrambling in your non-production Oracle HCM Cloud environment that is flexible, cost effective and requires no downtime, Apps Associates can help. Don't put you or your organization at risk. [Contact us](#) today to find out how we can get you started with minimal efforts in adoption, deployment, and maintenance.
